Squash Honeybaby F1 **AAS 2017 Edible Winner** **Regional Winner - Heartland**

Honeybaby is a very productive variety of winter squash producing numerous fruits on a compact plant. These shorter vines grow 2-3 feet in a semi-bush habit showing great garden vigor which results in healthier plants that resisted powdery mildew later into the season, especially in the Southeast. Short, wide fruits are slightly larger, sweet and nutty and more meaty than similar comparison varieties. Honeybaby is delicious steamed, baked or made into soups and stews. Plant as soon as soil temperatures reach 65 degrees to ensure maturity in 90-100 days.

Bred by Seeds By Design

Closest comparisons on market: Honeynut, Butterscotch F1

All-America Selections® was founded in 1932 and continues as the oldest independent testing organization in North America. Every year, new, never-before-sold in North America varieties are trialed in our Trial Grounds and professional horticulturists determine which varieties will be deemed winners based on their garden performance. AAS relies upon a public relations program to inform gardeners about AAS Winners that are announced three times each year.
